# WEATHER

## WEATHER SYNOPSIS BY REGION:

### NORTHERN CALIFORNIA AND CENTRAL COASTAL AREAS:

#### **Eureka Weather:**

Temperatures will remain near or below normal for the next several days as a trough sits over the west coast. Little to no rain is expected, although a few light showers will be possible north of Cape Mendocino early Wednesday.

#### **Medford Weather:**

Moderate zonal flow aloft will become southwesterly Tuesday and gradually increase through Wednesday as a long wave trough digs just offshore. It will be dry initially with the storm track to the north of the area, but the region will still catch the weak southern end of systems moving onshore. A short wave ejecting from the trough will move onshore over Washington Tuesday afternoon. The associated front will move onshore southern Oregon late Tuesday afternoon and evening. It will bring a slight chance of light rain to the coast, coast range, and Umpqua Basin. The digging long wave trough will move into the Pacific Northwest Tuesday night into Wednesday. This will force the storm track farther south. The initial surface front will move onshore Tuesday night into Wednesday morning. With little upper level support it will be weak. The north coast will once again get most of the precipitation, with very light amounts farther inland from the Cascades west and Siskiyou's north.

#### **Reno Weather:**

Typical late day breezes with near normal temperatures are expected again today. Another low pressure may bring increased winds Wednesday and Thursday with blowing dust. Further cooling is expected by the end of the week.

#### **San Francisco Weather:**

Aside from the possibility of coastal drizzle, dry weather conditions will persist through the workweek. Temperatures will cool slightly for the latter half of the week as an upper level trough drops southward into the Pacific Northwest.

# WEATHER

## WEATHER SYNOPSIS BY REGION:

### **CENTRAL CALIFORNIA AND SOUTHERN SAN JOAQUIN VALLEY:**

#### **Sacramento Weather:**

Temperatures will cool to well below normal by mid-week as another weather system moves into the region. Most of the showers are expected to remain across the far northern portion of the state. Milder conditions will return for the Labor Day weekend.

#### **Hanford Weather:**

Dry weather can be expected over the central California interior for the next several days. Temperatures will average slightly below normal for much of this week as onshore flow prevails. Gusty winds can be expected in the Kern County Mountains and Desert each afternoon and evening.

### **SOUTHERN CALIFORNIA:**

#### **Los Angeles Weather:**

Near normal temperatures and night through morning low clouds and fog will persist through the week. There may be slight warming late in the coming weekend.

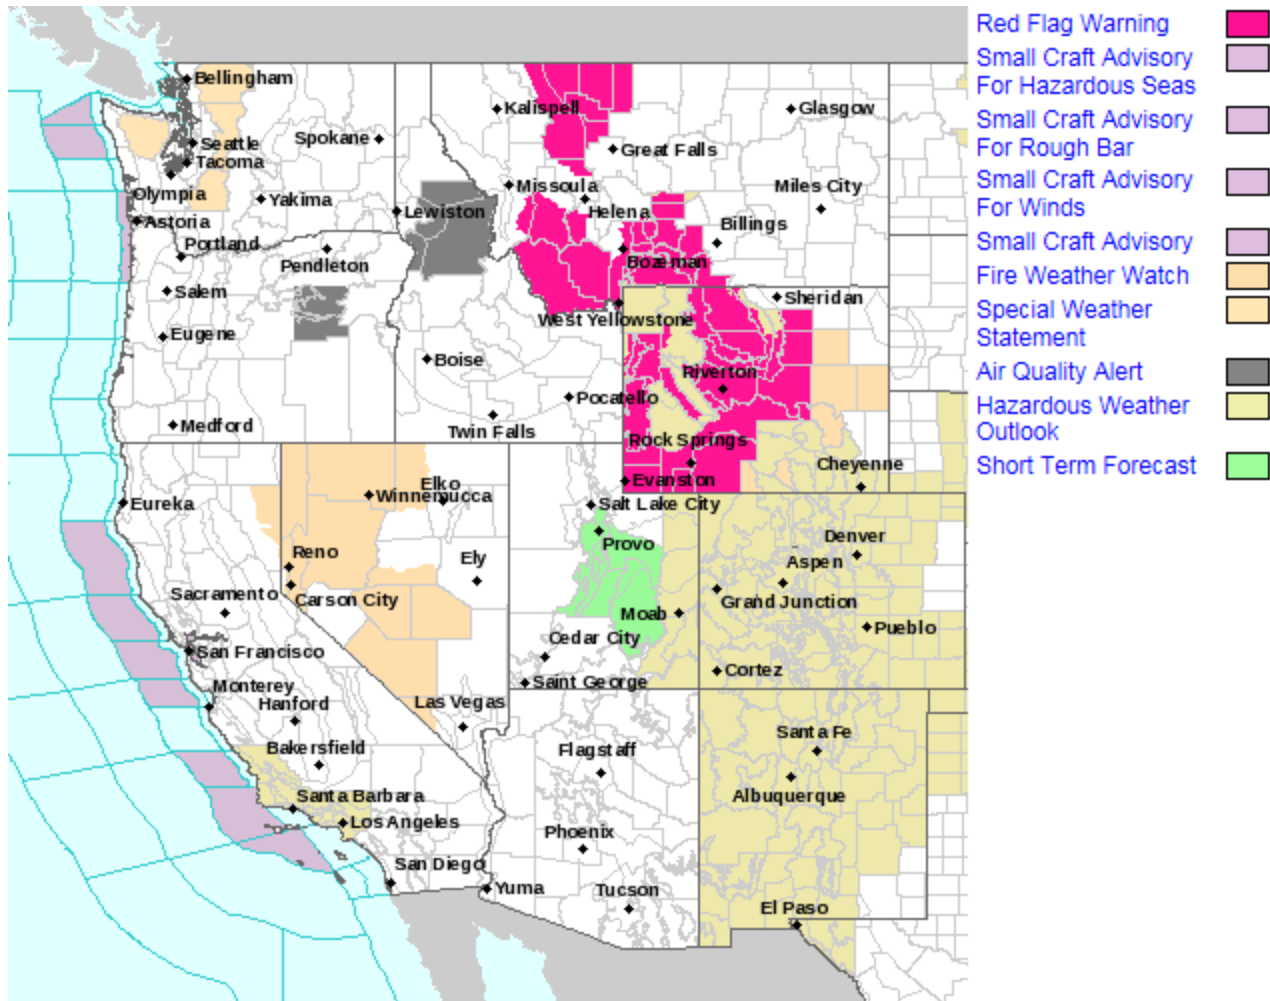

#### **Extreme Southwestern California including Orange, San Diego, Western Riverside and Southwestern San Bernardino Counties:**

A trough of low pressure along the west coast will continue to bring fair and cooler weather this week featuring night and morning coastal clouds extending into the valleys. Brisk onshore flow will bring locally gusty winds to the desert mountain slopes during the late afternoons and evenings. The trough of low pressure will weaken a bit during the holiday weekend, bringing a little warmer weather by Labor Day.

#### **Southeast California Weather:**

A trough of low pressure in the northwestern part of the country will bring a dry southwesterly flow to the area through the week. Temperatures will be near normal through midweek before falling below normal for the latter half of the workweek as the trough deepens. Periods of high clouds can be expected at times but otherwise dry conditions are expected.
